

MIRAGE OS STREAMING SERVICES

MIRAGE
AUDIO SYSTEM

The Mirage Media Server (MMS) and Mirage Audio System (MAS) operating system (OS) provides playback of the most popular online streaming music services. Many of the services support multiple accounts that can be entered and accessed directly from the UI controlling the MMS or MAS. Service terms vary per streaming service, and although one account may suffice for playback on one player of the MMS, multiple accounts may be required to play simultaneous streams of the service.

Below is a comprehensive list of streaming services available through the MirageOS, highlighting account types required and number of accounts needed to support simultaneous streams of playback per service.

SUPPORTED STREAMING SERVICES				
Streaming Service*	Account Type / Subscription Supported	Number of Accounts	Number of Simultaneous Streams per Account	Additional Information
